BRAIDED BARREL-SWIVEL LEASH SYSTEM

The **Northwoods Falconry, LLC** barrel-Leash system has been tested successfully on hundreds of raptors from Kestrels to Red-tails. It is virtually a tangle-free system. The small barrel swivel break strength is 340 lbs., medium size is 410 lbs. and large is 570 lbs. The leash and jess system is easy to install by following these steps:

- Insert both jess ends through the large opening in the end of the leash until the jess slits are on the other side of the leash opening. Hold the "ball" end of the leash above the jess openings for the next step.
- Insert the other end of the leash with the heat shrink tubing through both jess slits and pull the entire leash through until it is snug. You are now ready to tie the leash to a perch or gauntlet using a falconers knot.
- Simply reverse the process by pulling firmly down on the leash end "ball" at the jess slits. This will loosen the jess slits so the leash can be drawn all the way back through the jess slits.

With a little practice you will wonder why you ever used any other system for jess and leash attachment! THANK YOU AGAIN FOR PURCHASING YOUR EQUIPMENT FROM **NORTHWOODS FALCONRY, LLC.**
